## Chapter 4: PRESENTATION OF DATA

#### **Important terms and concepts:**

- 1. Tabulation Orderly arrangement of data in rows and columns.
- 2. Objectives of Tabulation:
  - a] Helps in understanding and interpreting the data easily.
  - b] It helps in comparing data.
  - c] It saves space and time.
  - d] Tabulated data can be easily presented in the form of diagrams and graphs.

#### 3. Main parts of a table.

- a] Title of the table It is a brief explanation of contents of the table.
- b] Table number It is given to be used for reference.
- c] Captions A word or phrase which explains the content of a column of a table.
- d] Stubs Stubs explain contents of row of a table.
- e] Body of the table: Most important part of table as it contains data.
- f] Head note: Head note is inserted to convey complete information of title.
- g] Source note refers to the source from which information has been taken.
- h] Foot note: It is used for pointing exceptions to the data.

#### FORMAT OF TABLE

.....

Table Number: .....

Title: .....

[Head note]

| Stub            | Sub-head |        |        | Total [Rows] |              |
|-----------------|----------|--------|--------|--------------|--------------|
| Stub            | Column   | Column | Column | Column       | Total [Kows] |
|                 | Head     | Head   | Head   | Head         |              |
| Stub<br>entries | ▲        | BODY   |        |              |              |
| Total           |          |        |        |              |              |
| [colums]        |          |        |        |              |              |

Source Note:

Foot Note :

# **Types of Table:**

- 1. Simple Table – data are presented according to one characteristic only.
- 2. Double Table – data are presented about two interrelated characteristics of a particular variable.
- 3. Three way table – This table gives information regarding three interrelated characteristics of a particular variable.
- 4. Manifold table – This table explains more than three characteristics of the data.

# **Diagrammatic Presentation of Data**

Utility or uses of diagrammatic presentation:

- 1. Makes complex data simple.
- 2. Diagrams are attractive.
- 3. Diagrams save time when compared to other methods.
- 4. Diagrams create a lasting impression on the minds of observers.

# Limitations of diagrammatic presentation:

- They do not provide detailed information. 1.
- 2. Diagrams can be easily misinterpreted.
- 3. Diagrams can take much time and labour.
- 4. Exact measurement is not possible in diagrams.

# Kinds of diagrams:

- I. Line diagrams - Lines are drawn vertically to show large number of items
- II. Bar diagram
- 1. Simple Bar diagrams – These diagrams represent only one particular type of data.
- 2. Multiple Bar diagrams – These diagrams represent more than one type of data at a time.
- 3. Subdivided Bar diagram or Component Bar diagram – These diagrams present total values and parts in a set of a data.
- Pie diagrams Circle may be divided into various sectors representing various III. components.

# **GRAPHIC PRESENTATION OF DATA**

Advantages of Graphic Presentation:

- Graphs represent complex data in a simple form. 1.
- 2. Values of median, mode can be found through graphs.
- 3. Graphs create long lasting effect on people's mind.

Disadvantages of graphic Presentation:

### Visit www.ncerthelp.com For All NCERT solutions,

CBSE sample papers, Question papers, Notes for Class 6 to 12 m Graphs do not show precise values.

- 2. Only experts can interpret graphs.
- 3. Graphs may suggest wrong conclusions.

## Rules of Constructing graph:

- 1. The heading of the graph should be simple, clear and self explanatory.
- 2. Graphs should always be drawn with reference to some scale.
- 3. False baselines should be drawn if the difference between zero and the smallest value is high.
- 4. Index should be made if different lines are drawn as in time series graphs.

## Types of Graphs:

- 1. Line frequency graphs Such graphs are used to represent discrete series.
- 2. Histogram A two dimensional diagram whose length shows frequency and the breadth shows size of class interval.

<u>Frequency Polygon:</u> A histogram becomes frequency polygon when a line is drawn joining midpoints of tops of all rectangles in a histogram.

<u>Frequency Curve:</u> Smooth curve joining the points corresponding to the frequency and provides frequency curve of the data.

<u>Ogive</u> : A curve obtained by plotting frequency data on the graph paper.

#### 1 mark questions:

- 1. Give the meaning of tabulation.
- 2. What is the heading of rows called?
- 3. When should false base line be used?
- 4. Which graph can be used to find value of median? [Hint: ogives]
- 5. What is histogram?
- 6. What is double table?

#### 3 mark questions:

- 1. State three rules of drawing a table.
- 2. Represent the following data with Histogram

| Wages          | 0-10 | 10-20 | 20-30 | 30-40 | 40-50 | 50-60 |
|----------------|------|-------|-------|-------|-------|-------|
| No. of Workers | 5    | 12    | 8     | 30    | 15    | 8     |

## 3. Construct histogram from the following:

| Midpoints   | 5 | 15 | 25 | 35 | 45 | 55 |
|-------------|---|----|----|----|----|----|
| Frequencies | 6 | 12 | 23 | 30 | 16 | 8  |

- 4. Prepare a blank table to show
  - 1] Year : 2004, 2005
  - 2] Faculty : Arts, Science, Commerce
  - 3] Gender : Male, Female

Visit www.ncerthelp.com For All NCERT solutions,

CBSE sample papers, Question papers, Notes for Class 6 to 12

| Items of Expenditure | Amount spent |
|----------------------|--------------|
| Food                 | 40           |
| Clothing             | 20           |
| Fuel and lighting    | 50           |
| House Rent           | 70           |
| Miscellaneous        | 20           |

#### 6 marks questions :

1. Construct less than and more than ogive :

| X | 20-40 | 40-60 | 60-80 | 80-100 |
|---|-------|-------|-------|--------|
| f | 3     | 7     | 11    | 9      |

#### 2. Draw less than and more than ogive :

| Profits   | 10-20 | 20-30 | 30-40 | 40-50 | 50-60 | 60-70 |
|-----------|-------|-------|-------|-------|-------|-------|
| No. of    | 4     | 7     | 10    | 20    | 17    | 2     |
| companies |       |       |       |       |       |       |

3. Make histogram and frequency polygon from :

| Class     | 0-20 | 20-40 | 40-60 | 60-80 | 80-100 |
|-----------|------|-------|-------|-------|--------|
| Frequency | 10   | 4     | 6     | 14    | 16     |

- 4. Distinguish between frequency polygon and frequency curve through an example.
- 5. Discuss the difference between simple table and complex table. Use example.

# C)

## **Chapter 5: Measures of Central Tendency**

## **Important Term and Concepts:**

1. <u>Average:</u> It is a value which is typical or representative of a set of data. Averages are also called Measures of Central Tendency.

# 2. <u>Functions of Average:</u>

- i] Presents complex data in a simple form.
- ii] Facilitates comparison.
- iii] Helps government to form policies.
- iv] Useful in Economic analysis.
- 3. <u>Essentials of a good Average:</u>
  - i. Simple to calculate.
  - ii. It should be easy to understand.
  - iii. Rigidly defined.
  - iv. Based on all items of observation.
  - v. Least affected by extreme values.
