(You can begin: The vet and I made a dash back to the car. Bruno was still floundering...)

(i) A dash back to car. Bruno still floundering about on his stumps, but clearly weakening rapidly; some vomiting, heavy breathing, with heaving flanks and gaping mouth.

Hold him everybody! In goes the hypodermic – Bruno squeals – 10 c.c. of the antidote enters his system without a drop being wasted. Then minutes later: condition unchanged! Another 10 c.c. injected! Ten minutes later: breathing less stertorous – Bruno can move his arms and legs a little although he can not stand yet. Thirty minutes later: Bruno gets up and has a great feed! He looks at us disdainfully, as much as to say, 'What's barium carbonate to a big black bear like me?' Bruno is still eating.
